SyllabAI

SMARTER ACADEMIC PLANNING MADE EASY

2026

INTRODUCING: SyllabAI

The smart and easy way to conquer your academic planning!

We took the concept of backward planning (looking at all due dates for assignments and quizzes and entering them into one calendar so you can plan in advance for heavy weeks) and took the labor off of your back!

Now you can simply upload a PDF copy of your class syllabus to SyllabAI and our AI will parse the document to find assignments and due dates for you and automatically upload them to a calendar with colored indications of expected difficulty.

Technical Details

-We met every week on Wednesdays after class in CSEL
-Also via zoom every Monday morning/afternoon with our TA

Group Rating:	Tools used
3/5	Github Project Page-confusing layout and terminology
5	Github-wonderful tool easy to use and organized
5	Postgres-after learning how to use this tool worked great
4	Spline Design for HTML/CSS-confusing at times but met our needs overall
1.5	Gemini API-incredibly slow during working hours
4	Qwen API-worked well but does cost a bit of money and not always reliable
3	Chai/Mocha-flexible but a lot of set up and difficult to understand results
5	AGILE-great flexibility and the cycle sprints concepts worked well for our timeline

CHALLENGES

- The biggest challenge was implementing the AI parsing feature. Many preliminary designs were far too slow or parsed poorly. Finding an AI API that worked well for our needs and was fast enough was a large slow-down in the development process. The solution came down to purchasing a small private AI API so that documents were parsed in a timely manner.
- The UI design was also something that caused us trouble in testing because although we (the designers) found the design intuitive, not all of our testing subjects did! The solution came in revising layout and style based on feedback.
- The Database: this had to constantly change to meet AI demands which would break other functions. The solution came with working extensively and testing frequently before merging to main.

FUTURE ENHANCEMENTS

-User Custimization: We are currently developing a light mode toggle and would love to implement the ability to customize the color design of your calendar
-Office Hour Feature: the office hour feature works but not as well as we would hope. We would like to develop this further
-Faster AI: right now our models are still somewhat slow and we would love for it to be faster and more consistent

Features of SyllabAI-shown in demo

01 Manage Syllabi

02 Auto Schedule Assignments

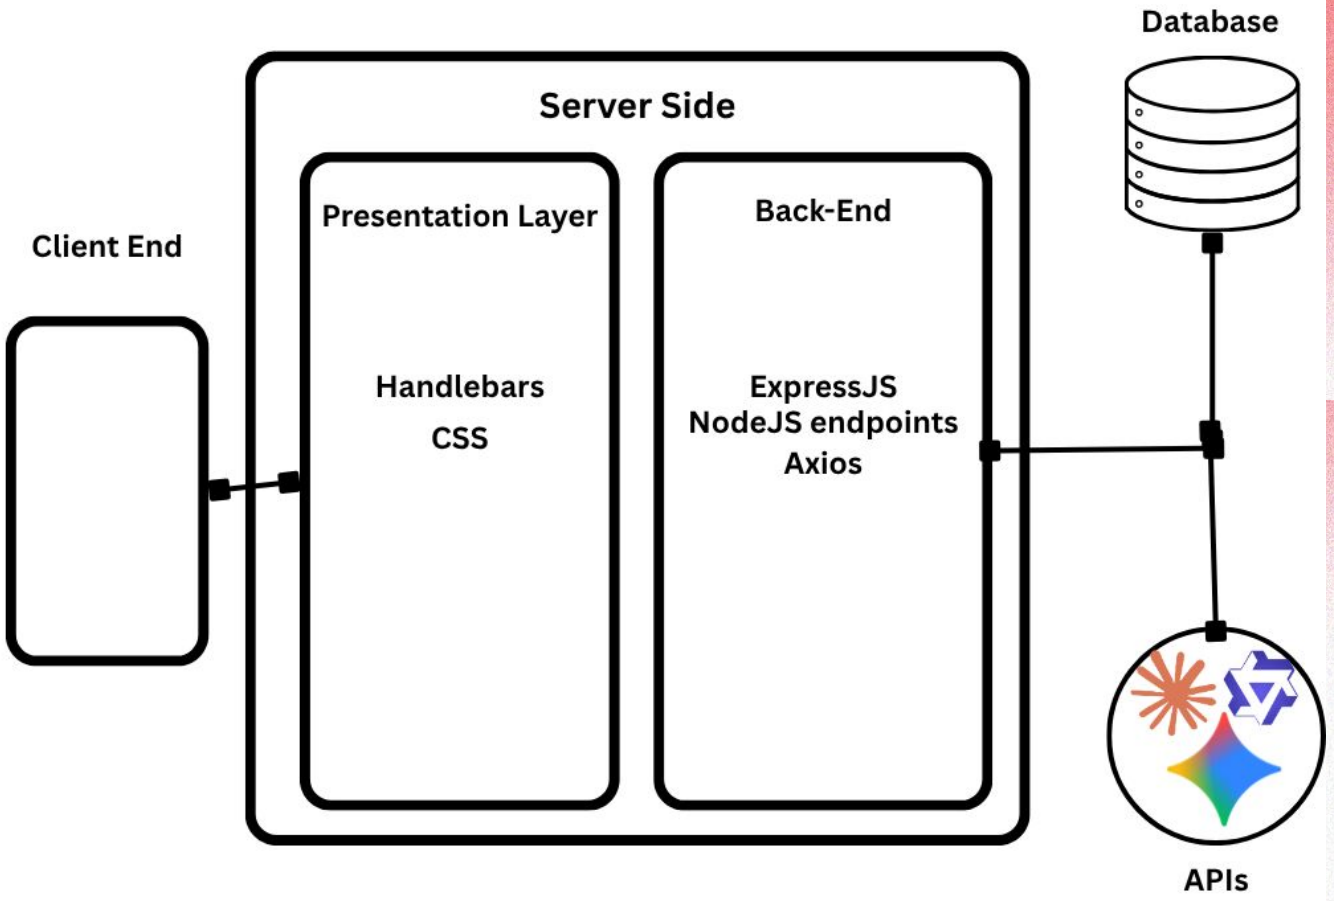
03 Color coded calendar by difficulty

04 Manually add assignments

05 Light Mode (In development)

06 Office Hours

07 In Development



Database
Server Side
Client End
Presentation Layer
Handlebars
CSS
Back-End
ExpressJS
NodeJS endpoints
Axios
APIs

Demonstration

SyllabAI

After a long 4 weeks we are proud to present to you our Software Development 3308 project.
